Quality from Quality

The Sires of the 2025 Sale Bulls

Landfall New Ground N90

Landfall New Ground N90 was the 2018 \$75,000 record Tasmanian bull noted for being long bodied and possessing fabulous presence. With a birth weight of just 3.8 and a 600 day weight in the top 12% of the breed, scrotal circumference in the top 1% and eye muscle area in the top 4% and docility in the top 13% of the breed positive fat in a proven bull with nearly 5000 progeny analysed.

Dunoon Quick Draw McGraw Q1163

Dunoon Quick Draw McGraw Q1163 was the highest selling bull at the 2023 Dunoon Spring sale at \$68000. He is described as being unique for the capacity and overall dimensions he possesses being in the top 17% for eye muscle area, top 10% for scrotal circumference and has excellent foot angle, steep pasterns, and leg angle.

Murdeduke Quarterback Q011

Murdeduke Quarterback Q011 one of the most used sires in the last two years. With 2000 progeny recorded this bull is regarded as one of the breeds great allrounders. Quarterback ranks well for direct calving ease, gestation length, milk, scrotal circumference rump fat and IMF and a little extra fat can help with an autumn like 2024.

Millah Murrah Paratrooper P15

Paratrooper has 5112 progeny recorded in 341 herds across Australia. Paratrooper himself sold for an Australian record \$160,000 in 2019. His first crop of sons went under the hammer at the 2021 Millah Murrah sale shattering every record in the breed. 43 sons sold to an average of \$46,990. Below breed average birth weight and well above average growth. One of Australias most widely used sires in the last two years.

Millah Murrah Rocket Man R38

Millah Murrah Rocket Man the \$280,000 Australian record breaking Angus sire is a son of Paratrooper P15. Combined with R38's tremendous physical attributes are his impressive spread of EBVs including top 10% for growth, top 13% scrotal, top 3% carcass weight and above average EBV'S for foot and leg angle.

Blackrock S39

Blackrock S39 was Lot 1 at our 2023 sale selling for \$18500. A big bull with good feet he will put some fat on his females ideal for our autumn calving herds.

SALE INFORMATION

The information in this catalogue is a result of accurate data collection at BLACKROCK and has been downloaded directly from the BREEDPLAN DATABASE.

At BLACKROCK we record Birth Weight, 200, 400 and 600 day weights, mature cow weight, eye muscle area, fat depth, intramuscular fat, scrotal circumference, foot claw and angle, and docility. In addition all sale bulls have been DNA parent verified and Genomically Enhanced EBV's provided.

Should you require more information on any particular bull please feel free to discuss it with us.

Health Treatments

All bulls have been vaccinated with 7 in 1 at 6, 7, 9 and 20 months of age. All bulls have been vaccinated for BVDV, Vibrio, Clostridial diseases and Leptospirosis. All bulls have been tested for BVDV antigen and are free from BVDV persistent infection (P.I.s). The bulls have undergone semen examination and supplemented with an All Trace Mineral Bolus prior to sale and will not require further mineral supplements for the remainder of 2025.

Johne's Disease

The Blackrock herd is tested clear Level 8 offering buyers the highest level of protection. This was confirmed in re-testing of females in November 2021.

DNA Paternity Verification

Please note that DNA paternity (sire of sale animal) verification has been conducted on all sale bulls.

Guarantee

We endeavour to ensure that all bulls are structurally sound and in satisfactory working condition at time of sale. Should a bull you purchase prove to be unsatisfactory at time of sale we will provide a replacement or negotiate a suitable alternative. However, this is not an unconditional guarantee and we recommend you insure your purchases for full cover at time of sale.

Shearwell NLIS Cattle Tags

For the 2022 and 2023 years Blackrock has been involved in trialling Shearwells NLIS cattle tags. These metal tags clasp over the ear and securely lock into place. Our reason for being involved in the trial was to overcome the poor retention rates experienced with the traditional button tags. The results of the trial have been very encouraging and last year, 2024 following completion of the trial we continued to Shearwell tags in all our calves.

Introducing Clemens Kiessig

“Since joining us at Blackrock, Clemens has improved our operation dramatically,” Ken says. “His knowledge and experience in livestock management and pasture production are an excellent fit for our business. Following is a short self introduction.”

At my Kindy “graduation” I proudly went on stage and announced that one day, when I’m big, I want to be a rich farmer. The crowd roared with laughter and I was not sure why. Today I know it was not the farmer bit they were laughing at.

I bought my first Jersey heifer at the age of 7 for \$50. She proved to be unable to have heifer calves and like Grandad always said when I inquired about her wellbeing, “she barely gives enough milk for a cup a tea”. So, with that business venture failing, what that cow, and her string of bull calves did was kindle a love for cattle and farming that shaped my career.

After getting a Higher Certificate in Sheep and Wool Production, I reverted back to my roots and went into the dairy industry. We moved to Australia in 2016, settling in Busselton.

My family and I have been calling Blackrock Angus home for the past five years. With 12 years of experience in pasture based dairy systems, a big focus on pasture production and seasonal calving as the profit drivers, it felt like I was right at home at Blackrock.

My wife, Marga, is running her Physiotherapy practice from the farm, and our four kids – Clemmie, Nina, Lente and our only Aussie Annie – are keeping us on our toes. We love this region and community. In my limited free time, I enjoy taking part in running and swimming races around the South West region.

It is a great privilege to be part of one of the oldest Angus bull breeders in WA that is still owned by the founding family, and having Ken as a mentor is invaluable.

I guess I will be a student forever. Angus is an ever-evolving breed, but the basics of cattle breeding remain the same. Farmers need bulls that can make them money. That is calves on the ground and weaners in the sale pens, kg per ha, is what it boils down to.

I am very excited for what the future of Blackrock Angus holds and proud to be part of such a great brand. We, as a family, are grateful for the opportunities Ken and Liz have given us.

Sincerely

Clemens Kiessig

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Maternal	MCH	cm	Genetic differences between animals in the height of mature females.	Higher EBVs indicate taller mature females.
	MBC	score	Genetic differences between animals in the body condition of mature females.	Higher EBVs indicate more body condition of mature females.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate less curl of the claw set.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more heel depth.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a less angular leg angle.
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	\$A-L	\$	The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Selection Indexes	\$D	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age.	Higher selection indexes indicate greater profitability.
	\$D-L	\$	The \$D-L index is similar to the \$D index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$D aims to maintain mature cow weight, the \$D-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$GN-L	\$	The \$GN-L index is similar to the \$GN index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GN aims to maintain mature cow weight, the \$GN-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$GS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection indexes indicate greater profitability.
	\$GS-L	\$	The \$GS-L index is similar to the \$GS index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GS aims to maintain mature cow weight, the \$GS-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
	\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability.
	\$T	\$	Genetic difference between animals in net profitability per cow joined in a situation where Angus bulls are being used as a terminal sire over mature breeding females and all progeny, both male and female, are slaughtered. The Angus Terminal Sire Index focusses on increasing growth, carcass yield and eating quality. Daughters are not retained for breeding and therefore no emphasis is given to female fertility or maternal traits.	Higher selection indexes indicate greater profitability.

Angus Australia Disclaimer and Privacy Information

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Parent Verification Suffixes

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV: both parents have been verified by DNA.

SV: the sire has been verified by DNA.

DV: the dam has been verified by DNA.

#: DNA verification has not been conducted.

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Privacy Information

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

Buyers option to opt out of disclosing personal information to Angus Australia

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents _____

from member _____ (name) do not consent to Angus Australia using my name address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Authorised Name: _____ Signature: _____

Date: _____

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350

Shearwell
Data

Livestock Systems

A World First! Designed for Retention.

Metal Cattle NLIS Tag

The Shearwell MET Tag is a revolutionary product, **combining excellent retention and eID capabilities**. Shearwell Data Ltd is the first company in the world to offer a metal eID tag for cattle that combines the durability of stainless steel with the reliability of eID. The MET Tag is being used on farms globally, with huge success.

 **NLIS Accredited**

 **Built-in HDX eID chip**

 **Stainless Steel**

NLIS MET
Tag

“

We have experienced much improved results from the Shearwell MET tags as demonstrated by the near 100% retention in our females to date.

Ken MacLeay, Blackrock Angus, Vasse WA

NEW NLIS MET Tag

Supplied in strips of 20 tags
Breeder & post-breeder available
